Anuj Dixit

Aspiring Full-Stack Developer | Python, FastAPI, REST APIs | React, JavaScript | Building SnapDrive @ SnapWeaz | B.Tech CSE 2028
Pune District, Maharashtra, India

Summary

I'm a B.Tech Computer Science student (2024–2028) focused on backend engineering, cloud technologies, and building software that actually gets used. I'm currently a Cloud + Python Intern at SnapWeaz, where I work on SnapDrive, a cloud-based file storage and sharing platform. My contributions include building file upload/download modules, implementing file search functionality, designing storage management logic, integrating and testing APIs, and adding activity logging features. On the backend, I work primarily with Python, FastAPI, SQLAlchemy, and SQLite, building REST APIs and managing version control with Git and GitHub. On the frontend, I have a solid foundation in HTML, CSS, and JavaScript, and I'm currently expanding into React and Tailwind CSS. I also have experience with C++ and Java from academic coursework, and I've explored the fundamentals of Generative AI and Agentic AI systems through hands-on workshops. I'm looking for opportunities where I can apply my backend and cloud skills to real-world problems while continuing to grow as a full-stack developer.

Experience

SnapWeaz

Cloud + Python Intern

May 2026 - August 2026 (4 months)

India

- Developing Python-based backend applications.
 - Learning cloud deployment and application hosting.
 - Working on deployment management and cloud infrastructure fundamentals.
 - Gaining hands-on experience with real-world software development workflows.
 - Collaborating remotely with the project team to build and deploy applications.
-

Education

D Y Patil International University, Akurdi, Pune

Bachelor of Technology - BTech, Computer Science · (August 2024 - February 2028)
